### WATER, WATER, EVERYWHERE

.....OR IS IT?

For their latest project, the Eco Team chose to focus on the topic of water and it very soon became apparent, what a vast subject it is!

The Eco team investigated everything from water sources to the water cycle, water consumption to water pollution and how we can work together to preserve this valuable resource.

The Eco Team were keen to be involved in **World Water Day**. This is a global event where countries across the world work together to help safeguard our water resources. The focus for this year was '**Glacier Preservation**'.

The team worked together to gather facts on glaciers and why they are so important. Their findings were presented in a special assembly.

(A copy can be found on the Eco team pages of the school website)

### Did You Know?

Glaciers store approximately 70% of the world's freshwater making them the largest reservoir of freshwater on Earth.

Don't forget to recycle your empty ink and toner cartridges with our 'Empties Please' scheme!

**Coming up.....** The Team will be working on upcoming worldwide events, including:

**World Oceans Day** - 8<sup>th</sup> June - the theme this year is sustainable fishing.

**World environment day** - 5<sup>th</sup> June - the theme this year is plastic pollution.
